

## Topics you want to KEEP

| Topic                  | Why It Should Stay                                                                                    | How It Helps You                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| Cloud computing system | Basically all topics are important but this topic, for me it gives the concept of different mechanism | It helps me give a overview and understand the different mechanism or concepts I need to understand it |

## Topics you want to REMOVE or REDUCE

| Topic                           | Reason for Removal/Reduction                                                                                                                                                         | Reason for Removal/Reduction                                                                                                                                                         |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Introduction to cloud computing | I just want a reduction because some of ideas are repeatedly appears in cloud computing system, just some topics or ideas or examples are just keep getting brought back (redundant) | I just want a reduction because some of ideas are repeatedly appears in cloud computing system, just some topics or ideas or examples are just keep getting brought back (redundant) |

## Topics you want to ADD

| Proposed Topic | Why It Should Be Added | Suggested Activities |
|----------------|------------------------|----------------------|
| N/A            | N/A                    | N/A                  |

## Comments/Suggestions

I think its good, but as a student I just want a deployment practices in different platform or clouds, not focusing only in aws and docker for students to have ideas about the pros and cons of those platforms interms of usability, security , user management and I suggest the final project would be individually made to avoid student, to rely on the cloud operational engineer role to deploy the application, I suggest every student can perform deployment and just adjust the documentation to become more achievable , thankyou!
